CaoSys Announces Impact Analysis Solution for Oracle E-Business Suite

18th October 2010

CaoSys, a developer of Governance, Risk, and Compliance (GRC) and productivity solutions introduced CS*Impact this week, the latest addition to their comprehensive line of GRC related solutions for Oracle E-Business Suite.

CS*Impact is a tool designed to aid change management processes in that it can help organizations improve visibility and understanding of the impact of change to key configurations and setups within their enterprise applications. The solution makes it easy to compare your current configuration against a separate instance or against a baseline from the same instance.

Craig O'Neill, CTO at CaoSys said "Oracle E-Business Suite is a huge suite of applications with many thousands of configurations; over time it is inevitable that many of these configurations will change whether it be the result of installing a new patch or manual change and as a result there is often a lack of visibility and consistency across application instances. What may be considered to be a simple and innocuous change can have major ramifications if that change is not fully understood or replicated on other similar environments".

CS*Impact is fully embedded into Oracle E-Business Suite and it can be used to perform a detailed impact analysis across multiple instances of the applications. This is a potentially huge benefit to most organizations since all businesses using Oracle E-Business Suite will at some point install patches and upgrades and all businesses will make their own configuration changes. Utilising CS*Impact an organization can quickly gain the required visibility that will drive understanding and help mitigate against the risks of not knowing the impact of a given change.

"CS*Impact is a great new addition to our suite of solutions, its introduction further demonstrates our continued commitment to the Oracle E-Business Suite platform and it will be a valuable part of any organizations GRC toolkit." continued O'Neill.

CS*Impact is available from today for both Oracle E-Business Suite release 11i and R12. CaoSys will soon be announcing a SaaS (Software as a Service) version of the solution to complement its existing SaaS offering for dealing with Segregation of Duties, CS*Proviso.

About CaoSys

CaoSys offers several solutions that fall into two distinct market segments, compliance and productivity. The companies compliance based solutions, CS*Audit, CS*Comply, CS*Impact and CS*Secure enable organizations to implement data auditing, segregation of duties (SOD) internal controls, impact analysis and data security based controls. Their productivity based solutions, CS*Form, CS*Accelerate and CS*Enquire cater for several needs such as onscreen interactive reporting, application extensions, application building, application augmentation and ad-hoc querying to name but a few.

CaoSys is an independent software solution provider within the GRC and productivity software space. Its solutions offer radically different ways of implementing solutions for the Oracle E-Business Suite that save time and money. Their solutions provide all the main disciplines for a comprehensive GRC solution, from traditional conflict based segregation of duties to high risk single function security to data segregation and hiding to application configuration to powerful data auditing as well as a host of very powerful productivity tools. CaoSys software helps businesses streamline and secure their applications making their users and therefore their business more efficient whilst ensuring assurance and accountability. CaoSys was formed during 1999 and is based in the UK.
